                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil 4732114 |gb| AFF29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail.cDNA Library Preparation: M.B. RNA was prepared by acid-phenol, followed by one round of oligo dT selection. cDNA library preparation was with the BRL/Life Tech. Superscript Plasmid system. An oligo-dT NotI primer for first strand synthesis generated gcggccgcc(t)n at the 3' end of the clones. A 5' SalI gcggcccc(t)n at the 3' end of the clones. A 5' SalI adaptor was used with sequence 5'-gtcgaccacgcgtccg-3'. Resulting cDNAs were size selected (average size 2 kb), NotI digested, and ligated into NotI/SalI-cut pSPORT1. Library was constructed by Dr. Manfred Gessler."

'Bragg' seedlings that were mock-infected 48 hours prior to harvest. Dr. Gary Stacey generously donated the tissue. The roots were flash-frozen in liquid nitrogen. Strategene's cDNA Synthesis Kit (catalog number 200401) was used to synthesize the cDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDN
                                                                                                                                                      /note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: XhoI; The mRNA was isolated from roots of 7 day old

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with cloned by DNA, ligated to EcoRI adapters and subsequently phosphorylated. The cDNA was then precipitated and redissolved in sterile, RNase-, DNase-free water. The XhoI site within the first- strand synthesis primer was then restricted by digestion with XhoI from Promega (40U)(1); all XhoI sites in the cDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500bp cutoff, using Sephacryl S-500 High Resolution (Pharmacia Biotech) in a 2-mm diameter column and a bed volume of approximately Iml. The column eluent was precipitated, redissolved, and ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript II SK(+) vector that has been digested with EcoRI and XhoI, and phosphorylated by Stratagene). This library was constucted in the laboratory of Dr. Paul Keim and Dr. Virginia H. Coryell at Northern Arizona
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       was hemimethylated. A modification of Stratagene's first-strand synthesis primer was used. An 'anchor' nucleotide (V=A, C, or G) was added to the 3' end of the primer [GAGAGAGAGAGAGAGAGAGAGAGTTCTCGAG(T)18V] to ancho:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5.8%;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 40.2; D

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TCAGCAACAGGCTAAGCACATGTCATATTGAAGGTGATGACCTGCATATCCAGAGGAATG 504
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      first-strand synthesis primer was used. An 'anchor' nucleotide (V=A,C, or G) was added to the 3' end of the primer [GAGAGAGAGAGAGAGAGAGACTAGTCTCGAG(T)]80] to anchor the primer [GAGAGAGAGAGAGAGAGACTAGTCTCGAG(T)]80] to anchor the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with cloned pfu DNA polymerase, ligated to EcoRI adapters and subsequently phosphorylated. The XhoI site within the first-strand synthesis primer was then restricted by digestion with XhoI; all XhoI sites in the cDNA would be protected by their hemimethylated status. The CDNA constructs were size-fractionated with a 500bp cutoff, using GibcoBRL Life Technologies' cDNA Size Fractionation column. The column eluent was then ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript IS K(+) that has been digested vector (pBluescript IS K(+) that has been digested with EcoRI and XhoI, and phosporylated by Stratagene). Both the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n=25). This library was constructed by Dr. Paul Keim and Dr. Virginia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               quality sequence stop: 436
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5.8%;

The human TIF was identified based on homology to a murine TIF, which was identified by subtraction cloning from a murine lymphoma cell line BM5147 in the presence or absence of interleukin 9 (IL-9). BW5147, can be grown in vitro, without the need to add any cytokines to its culture medium. Many IL-9 activities are mediated by activation of STAT transcription factors. The novel TIFs were expressed in the presence of IL-9, but not in its absence. TIFs induce STAT activation in cells. They can be used, e.g. in the stimulation of regeneration of targeted tissues. Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The ITFs and their coding sequences are useful in the treatment of asthma, allergies and lymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a cell (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This cDNA encodes a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page 38; 46pp;

                                             The invention relates to an isolated nucleic acid molecule, which encodes a T cell derived inducible factor (TIF) which are upregulated by the cytokine interleukin-9 (II-9) and induce STAT transcription factor activation. The TIF proteins (or their muteins) may be used to test II-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunodeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. The molecules promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas. The present sequence encodes human TIF.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Stimulating expression of STAT transcription factor and inducing production of acute phase protein in a cell, involves contacting capable of expressing STAT with T cell derived inducible factors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to nucleic acid molecules encoding T cell derived inducible factors (TIF8) also known as interleukin-21 (IL-21) TIF polynucleotides are upregulated by the cytckine, IL-9. IL-TIF or IL-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is human TIF cDNA. The TIF gene is located on chromosome 12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Dumoutier

                                                                                                                                               The present invention relates to an isolated nucleic acid molecule, whice encodes a T cell derived inducible factor comprising an amino acid sequence encoded by 6 defined nucleotide sequences. The nucleic acid molecules are shown to be up regulated by the cytokine interleukin-9 (II-9) and are described as T Cell Derived Inducible Factors (TIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STAT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding T inducing STAT activation

The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and

The specification describes human polypeptides, designated CC PRO196, PRO444, PRO183, PRO185, PRO210, PRO215, PRO217, PRO242, PRO288, CC PRO355, PRO1316, PRO1308, PRO1183, PRO1272, PRO4191, PRO4242, PRO288, CC PRO345, PRO353, PRO1318, PRO1183, PRO1272, PRO4314, PRO301, PRO187, CC PRO337, PRO1411, PRO4356, PRO266, PRO265, PRO341, PRO1096, PRO6003, CC PRO6004, PRO350, PRO2630 and PRO6039, The biological activity of cells CC in the death of the cells. The polymucleotides encoding these CC polypeptides are useful in the recombinant production of the CC polypeptides, as a hybridisation probe to screen libraries to isolate CC polypeptides, as a hybridisation probe to screen libraries to isolate CC polypeptides, as a hybridisation probe to screen libraries to isolate CC considered the development and screening of the specific animals which are useful for the development and screening of therapeutically useful CC reagents. The polynucleotides can also be used in gene therapy e.g. to XX replace a defective gene.

CC identity to a 101 amino acid interleukin (II)-22 sequence. The invention is useful for detecting II-22R (II-22 receptor) or II-10Rbeta polypeptide CC in a sample which involves contacting sample with an II-22 polypeptide cC and determining the formation of an II-22R/II-22 polypeptide conjugate or CC polypeptide is labelled with a detectable label or is attached to a solid CC support. The polypeptide is also useful for linking a bioactive molecule, CC e.g. toxin, radiolabel or antibody that causes the death of the cell, to CC involves contacting the cell with II-22 polypeptide that is bound to the CC involves contacting the cell with II-22 polypeptide which CC involves contacting the cell with II-22 polypeptide which CC involves contacting the cell with II-22 polypeptide with CC involves contacting the cell with II-22 polypeptide with CC involves contacting the cell with II-22 polypeptide with CC involves contacting the cell with II-22 polypeptide with CC involves contacting the cell with II-22 polypeptide with CC involves contactive molecules to cc the cell. The molecules of the invention can also be used for modulating biological activity of cell expressing II-22 polypeptide with invention is useful CC whereby the cell is killed and the antibody of the invention is useful CC original activity of cells. The antibody of the invention is useful CC creating by pancreatic cells. The antibody is also useful for treating a pancreatic carcinoma including acinar cell carcinoma or mixed cell population CC pancreatic carcinoma and for reducing the activated or inflamed condition CC pancreatic carcinoma and for reducing the activated or inflamed condition CC in the pancreas in a mammal. The present nucleic acid sequence encodes the human interleukin 22 (II-22) protein of the invention. This sequence is a clone designated DNA125185-2806.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to
ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic,
antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic
activities, and can be used in gene therapy. The PRO polynucleotides,
proteins, agonists and antegonists are useful for treating or diagnosing
a cardiovascular, endothelial or angiogenic disorder in a mammal,
ce.g. cardiac hypertrophy, trauma, cancer, age-related macular
ce.g. cardiac hypertrophy, trauma, cancer, age-related macular
chegeneration, atherosclerosis, hypertension, arterial restenosis,
crheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis,
crymphangitis, tumour angiogenesis (such as breast carcinoma and liver
carcinoma) and wound healing. The PRO polynucleotides have applications
cin molecular biology, including use as hybridisation probes, and in
chromosome and gene mapping. ABL88259 to ABL88267 represent primers and
cryptopic and the exemplification of the present invention.

One hundred and twenty two useful for treating a PRO r such as lung cancer, colon tumour or liver tumour -

y two nucleic PRO related o

c acids encoding F disorder and for , breast tumour, F

PRO polypeptides, r diagnosing tumours prostate tumour, re

tumour, rectal

cancer,

Claim

2

Figure 243; 359pp;

English

The invention relates to one hundred and twenty two nucleic acids encoding PRO polypeptides. The sequences of the 122 PRO polymucleotides encode human secreted proteins. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating a PRO related disorder The PRO polypeptides are useful for diagnosing tumours, especially lung

related disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or liver tumour. The PRO polypeptides are useful for stimulating the proliferation of, or gene expression, in pericyte cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating or inhibiting the proliferation of normal human dermal fibroblast cells. The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABK33536 ABK33657 represent human PRO protein coding sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1152 BP; 342 A; 244 C; 228 G; 338 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Local Similarity

```
CC This sequence represents the gene sequence for a human interleukin 10 CC homologue II-D110. The invention also relates to another II-10 homologue ID-210 (AAF28842). The II-D110 is useful for treating conditions CC associated with abnormal physiology or development, including CC inflammatory conditions, either acute or chronic. The new cytokine CC also plays a role in the regulation or development of haematopoietic CC cells, e.g. lymphoid or myeloid cells, which affect immunological CC responses, such as inflammation and/or autoimmune disorders. These may CC also be used in drug screening to identify compounds having binding CC affinity to or other relevant biological effects on II-D110 functions, CC in anti-tumour therapy, as probes for detecting II-D110 functions, CC in finity compatients suspected of having an abnormal condition, e.g. autoimmune CC or inflammatory, in raising or screen antibodies, as immunogen, in CC diagnostic assays, and in detecting, isolating or identifying a DNA clone CC consisting or II-D210 from a natural source. II-D210 antagonists may be used to block immune responses, e.g. in situations as inflammatory or autoimmune responses, including rhemunatoid arrhitits, systemic lupus
                            erythematosus, or Hashimoto's autoimmune responses.
                                                                                                                                                                                                                                                                                                                                                             Claim 3;
                                                                                                                                                                                                                                                                                                                                                                                         New interleukin-D110 genes and polypeptides useful for treating conditions associated with abnormal physiology, particularly e inflammatory or autoimmune disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27-MAY-1999;

CC endometriosis), autoimmune (AIDS), Addison's disease), and cell cc endometriosis), autoimmune (AIDS), Addison's disease), and cell cc proliferative disorders including cancers (of the breast, addenal gland, cc bone). They may also be used to treat fatal familial insomnia, cc mental disorders (anxiety, schizophrenia, mood), as well as infections cc caused by parasites (malaria, leishmania, trypanosoma), viral cc (adenovirus, coronavirus, flavivirus), bacterial (e.g. pneumococcus, bacillus), and fungal (aspergillus, blastomyces, cc agonists, pharmaceutical compositions, and antibodies may also be used for treating or preventing disorders associated with increased or decreased expression or activity of EXCS. EXCS polynucleotides may also be used to detect and quantify gene expression in biopsied tissues in cc probes, and to detect intervention, to detect the presence of excess expression of EXCS, to monitor regulation of EXCS clevels during therapeutic intervention, to detect the presence of coraffected individuals. Antibodies may also be used to detect differences in gene sequences among normal, carrier cromosers or inhibitors. Sequences AAC84293-C84318 represent nucleic acid molecules encoding the EXCS of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides human extracellular signaling molecules (EXCS) and polynucleotides which identify and encode EXCS. EXCS can be expressed by standard recombinant methodology. The amino acid and nucleic sequences of EXCS are useful for diagnosing, treating and preventing infections and gastrointestinal (peptic ulcer, dysphagia, pancreatitis), neurological (e.g. epilepsy, ischemic cerebrovascular disease, stroke), reproductive (infertility, ovulatory defects,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human extracellular signaling nucleic acids and for diagnosing, treating and preventing infections a gastrointestinal, neurological, reproductive, and autoimmune/inflammatory disorders -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .6
 The present invention provides the protein and coding sequences novel human GIL-19/AEZ89 protein. The protein shows homology to interleukin-10 (IL-10) and is assumed to be a cytokine. It can be in the regulation of cell proliferation and differentiation, haematopoiesis, immune stimulation or suppression, tissue growth
                                                                                                        Claim 1; Page 59; 60pp; English.
                                                                                                                                       Human GIL-19 protein that shows a high degree of homology to IL (interleukin)-10, useful in upregulation of humoral immune responses, as an antiinflammatory agent and as a modulator of immune responses associated with injury -

ZCYTO18 DNA and its antibodies are useful for detecting cancer and inflammation. ZCYTO18 protein is useful for killing cancer cells. It is useful for increasing platelets in a patient or injured tissue. It is also used in gene therapy. The present sequence is a cDNA encoding novel human cytokine, ZCYTO18 DNA is located at the 12q15 region of chromosome 12.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC zcytor16 protein is useful for: inhibiting IL-TIF induced proliferation CC or differentiation of hematopoietic cell(s) (progenitors); reducing CC IL-TIF induced or IL-9 induced inflammation; and suppressing an CC inflammatory response in a mammal with inflammatory. Heteromeric/CC used to reduce progression and symptoms of cancer. Zcytor16 polypeptides CC can also be used to detect IL-TIF levels which is indicative of CC can also be used to detect IL-TIF levels which is indicative of CC arthritis and cancer. Antibodies that bind zcytor16 polypeptides and the CC polypeptides themselves are useful for the treatment of inflammation, CC diseases. The unatoid arthritis and atherosclerosis) and autoimmune CC diseases. The antibodies and atherosclerosis) and autoimmune CC diseases. The antibodies and zcytor16 polypucleotides are also useful CC for detecting cancer. The present sequence represents a cDNA encoding Yxx
